Suction

Length: 7 1/4 IN

Author: Dr. Charles Frazier

EST.
1900's

Suction Frazier 10Fr, Angled, 7 1/4in

Common Uses:

Used to remove debris and fluids from surgical sites for greater access and visibility.

Properties:

- Finger cut-off valve
- Atraumatic distal tip

Variations:

- Angled or straight profile
- Multiple diameters (French)
- Multiple working lengths

Function:

Suction is controlled by a thumb valve in the handle. Suction setup involves attaching disposable tubing to the end of the instrument. This tubing is also attached to a suction device and canister.

Did you know?

Dr. Charles Harrison Frazier, with Dr. Harvey Cushing, was responsible for the development of neurosurgery in the United States.
