

ALLIS

CLAMP

Length: 4x5, 6in
Author: Oscar Huntington
Allis

EST.
1901

Clamp Allis 4x5, 6in

Common Uses:

Hysterectomy, oophorectomy, and tonsillectomy

Primary Properties:

- Ring Handle
- Teeth
- Self Retaining

Variations:

- Heavy / Delicate
- Lengths: 6in-18in
- Curved/Straight
- Teeth: 3x4, 4x5, 6x7

Function:

The Allis clamp is a surgical instrument with sharp teeth, used to hold or grasp heavy tissue. It is also used to grasp fascia and soft tissues such as breast or bowel tissue.

Did you know?

Allis clamps can cause damage, so they are often used in tissue about to be removed.
