## Dissector Canaloplasty Manipulator

### Common Uses:

Neurosurgery, Ophthalmic Surgery & Cardiovascular Procedures

### Primary Properties:

- Angled shaft
- Flattened Sandblasted Tip
- Round Handle

### Variations:

- Angled Straight Blade
- Angled Curved Blade

### Function:

This dissector is used to manipulate structures around blood vessels to expose the desired vessel. Also used to grab, hold and pull peritoneal tissue off of organs as well as being used for blunt dissection between tissue planes.

#### Did you know?

This is commonly employed by surgeons during hand procedures to remove tissues and bone fragments, and to scrape, elevate and manipulate delicate tissues.
